Is Your Power BI Report Ready for Arabic? 19 Things to Check

From a report built in English, the twin does most of the work in one plan. On an Arabic page you built yourself, the answer is a Desktop setting, or none.

Each kind has one of three answers: **DataArcus does it, through your approval.** **A Power BI Desktop setting.** **Power BI has no setting for it.** Desktop isn't available in Arabic, so the names are its English ones.

	What reads wrong	From a report built in English	On an Arabic page you built
1. Where the eye starts			
☐	**The heading at the left** An Arabic reader starts at the top right.	DataArcus: the twin	Move it by hand
☐	**The Tab order** right to left, top to bottom	DataArcus: the twin	View > Selection > Tab order
☐	**Page buttons in a row** the first page's button is at the right	DataArcus: the twin	Move the buttons
☐	**The page navigator** For a row that starts at the right, use single page buttons.	No setting	No setting
2. Text			
☐	**Titles aligned left** Left is Power BI's default.	DataArcus: the twin	Title > Horizontal alignment: Right
☐	**Arabic text boxes aligned left**	DataArcus: the twin	Align the paragraphs right
☐	**Arabic and English in one text** A title like «Region حسب المبيعات» mixes two directions.	DataArcus: the twin	No setting: retype or reword
☐	**English titles, text boxes, buttons, page names** a text without an approved Arabic stays as it is	DataArcus: the twin, in the Arabic you approve	Write each in Arabic
☐	**English field names** your model is not renamed	DataArcus: the twin	Rename for this visual
3. Charts			
☐	**Bar charts**	DataArcus: the twin	Invert range; the axis on the other side
☐	**Column, line and combo charts** a category axis ignores Invert range: the sort is what turns it round	DataArcus: the twin	Sort descending; the value axis at the right
☐	**Charts over time** the first period at the right	DataArcus: the twin (your choice)	Sort descending by the time field
☐	**Waterfalls** Or keep Power BI's own waterfall, left to right.	No setting; DataArcus's waterfall from the right (no Total)	No setting
4. Tables and the matrix			
☐	**Table column order** the first at the right	DataArcus: the twin	Reverse the columns in the field well
☐	**Matrices** show the same numbers as a table or a chart	No setting (the twin: the measures' order only)	No setting
5. Month and day names			
☐	**Month and day names** Power BI doesn't translate your data	DataArcus: the calendar script, applied by you	An Arabic column, Sort by column
6. Slicers			
☐	**Slicer items** The twin moves the slicer, nothing more.	No setting	No setting
☐	**Pill slicers' order** the first value is at the right	DataArcus: the twin	Sort descending
☐	**Pill values not centred** centre the values in their buttons	A Desktop setting	Centre the values

Run the check on your report

DataArcus's check_report has an Arabic lens from DataArcus 0.3.1 (0.3.0 has no lens). It reads the report's files on your computer, never your data, and changes nothing.

With DataArcus installed in Claude, ask: *"Is my report ready for Arabic? Use check_report with the Arabic lens."*
